13 DESCRIPTION OF COMPONENT

The TX6350 - Infrared Gas Sensing eModule is an Ex component designed to measure gas concentration by means of a Dynament Type MSHia *** or Type MSHia-P*** Gas Sensor (separately certified component to the code Ex d+ia I Ma). The microcontroller inside the module communicates digitally with the Gas Sensor to obtain the current gas reading. This reading is provided as an output signal which is monitored by suitably certified equipment into which the module is plugged.

The Infrared Gas Sensing eModule contains a sub-assembly comprising a CPU board (alternatively CPU OSC Board), baseboard and a connector board. The CPU board makes use of a pressure sensor which is used to monitor normal atmospheric pressure. The sub-assembly fits inside a plastic enclosure with one face of the connector board exposed to connect with an external circuit.
